interconnections that realize the architectural specifications. It describes the function of and design of the various units of digital computer that store and process information. Computer hardware: Consists of electronic circuits, displays, magnetic and optical storage media,

CS1252 – COMPUTER ORGANIZATION AND ARCHITECTURE

Architecture and organization. Computer architecture deals with the design of computers, data storage devices, and networking components that store and run programs, transmit data, and drive interactions between computers, across networks, and with users. Computer architects use parallelism and various strategies for memory organization to design computing systems with very high performance.
