Working: The domestic refrigerator works on vapour compresses system. It flows diagram has been shown in Fig. 6.5. It shows, the refrigerator compressor which compresses the refrigerant vapour (generally freon-12) and discharges it to the air condenser coils (generally provided at the back of the refrigerator), where it dissipates its latent heat and is converted into liquid form.

Design Of Domestic Refrigerator Engineering Project

To design and analyse a refrigeration system, we want to know what the thermodynamic properties will be for the refrigerant at our four key components. Point 1: between the evaporator and the compressor. Point 2: as it leaves the compressor. Point 3: when it leaves the condenser, before it enters into the expansion valve.

In this project using LPG as refrigerant we have design and analyze refrigerator. LPG is stored in cylinder at high pressure. As this pressurized LPG is passed through the capillary tube of small internal diameter, the pressure of LPG is decreased due to expansion and phase change of LPG occurs in an isenthalpic process.
