Plastic Injection Molds Design & Make | Injection Mould ...

The mold used in injection molding is composed of two halves. They are known as the cavity side (side A) and the core side (side B). The core side is where the ejector plate and ejector pins are located. Once the molten plastic solidifies, the side A moves up and the side B then ejects the part resting on it using ejector pins.

How to Design an Injection Mold - 3D Insider

Designing a part that will be produced with plastic injection molding has different requirements than a part that will be produced with CNC machining. For example, a part designed for the CNC machining process might require different design aspects to be injection molded.
